

Quality without compromise

Improve regulatory compliance and reduce maintenance costs with XCLUDER™ Rodent Control Fill Fabric.

The soft seals on overhead and roll-up doors provide little resistance to rats and mice and are one of the most common rodent entry points.

XCLUDER™ is the most effective tool pest management professionals can use for exclusion projects and services.

XCLUDER™ Fill Fabric brings ease of installation and the most cost effective exclusion material to the industry. A stainless steel non-rust material used to fill holes and cracks to prevent rodents and pests from entering homes, buildings, apartments and other facilities.
